Administering medicines

Policy statement

While it is not our policy to care for sick children, who should be at home until they are well enough to return to the setting, we will agree to administer medication as part of maintaining their health and well-being or when they are recovering from an illness. We ensure that where medicines are necessary to maintain the health of the child, they are given correctly and in accordance with legal requirements.

In many cases, it is possible for children's GPs to prescribe medicine that can be taken at home in the morning and evening. As far as possible, administering medicines will only be done where it would be detrimental to the child's health if not given in the setting. If a child has not had a medication before, it is advised that the parent keeps the child at home for the first 48 hours to ensure there are no adverse effects, as well as to give time for the medication to take effect.

These procedures are written in line with guidance in *Managing Medicines in Schools and Early Years Settings*; the manager is responsible for ensuring all staff understand and follow these procedures.

The key person is responsible for the correct administration of medication to children for whom they are the key person. This includes ensuring that parent consent forms have been completed, that medicines are stored correctly and that records are kept according to procedures. In the absence of the key person, the supervisor is responsible for the overseeing of administering medication. We notify our insurance provider of all required conditions, as laid out in our insurance policy.

Procedures

- Children taking prescribed medication must be well enough to attend the setting.
- Only medication prescribed by a doctor (or other medically qualified person) is administered. It must be in-date and prescribed for the current condition (medicines containing aspirin will only be given if prescribed by a doctor).
Children's prescribed medicines are stored in their original containers, are clearly labelled and are inaccessible to the children.
- Parents give prior written permission for the administration of medication. The staff receiving the medication must ask the parent to sign a consent form stating the following information. No medication may be given without these details being provided:
 - the full name of child and date of birth;
 - the name of medication and strength;
 - who prescribed it;
 - the dosage to be given in the setting;

- how the medication should be stored and its expiry date;
- any possible side effects that may be expected; and
- the signature of the parent, their printed name and the date.

The child's key worker or supervisor receives the child's medication and asks the parent to complete a consent form.

The administration of medicine is recorded accurately in our medication record folder each time it is given and is signed by the key person/supervisor. Parents are shown the record at the end of the day and asked to sign the record book to acknowledge the administration of the medicine. The medication record book records the:

- name of the child;
- name and strength of the medication;
- date and time of the dose;
- dose given;
- signature of the key person/supervisor; and witness
- parent's signature.

Storage of medicines

- All medication is stored safely out of children's reach or refrigerated as required. Where the shelf or refrigerator is not used solely for storing medicines, they are kept in a marked plastic box.
- The child's key person is responsible for ensuring medicine is handed back at the end of the day to the parent.
- For some conditions, medication may be kept in the setting to be administered on a regular or "as and when" required basis. Key persons check that any medication held in the setting is in date and return any out of date medication back to the parent.

Medicines that do not require refrigeration are kept with the first aid box.

- If the administration of prescribed medication requires medical knowledge, individual training is provided for the relevant member of staff by a health professional.
- If rectal diazepam is given, another member of staff must be present and co-signs the record book.
- No child may self-administer. Where children are capable of understanding when they need medication, for example with asthma, they will be encouraged to tell their key person what they need. However, this does not replace staff vigilance in knowing and responding when a child requires medication.

Children who have long term medical conditions and who may require ongoing medication

- A risk assessment is carried out for each child with long term medical conditions that require ongoing medication. This is the responsibility of the manager alongside the key person. Other medical or social care personnel may need to be involved in the risk assessment.
- Parents will also contribute to a risk assessment. They should be shown around the setting, understand the routines and activities and point out anything which they think may be a risk factor for their child.
- For some medical conditions, key staff will need to have training in a basic understanding of the condition, as well as how the medication is to be administered correctly. The training needs for staff form part of the risk assessment.

- The risk assessment includes vigorous activities and any other activity that may give cause for concern regarding an individual child's health needs.
- Arrangements for taking medicines on outings and advice are sought from the child's GP if necessary where there are concerns.
- A health care plan for the child is drawn up with the parent; and the information must be shared with other staff who care for the child.
- The health care plan should include the measures to be taken in an emergency.
- The health care plan is reviewed every six months, or more frequently if necessary. This includes reviewing the medication, e.g. changes to the medication or the dosage, any side effects noted etc.

Managing medicines on trips and outings

- If children are going on outings, staff accompanying the children must include the key person for the child with a risk assessment, or another member of staff who is fully informed about the child's needs and/or medication.
- Medication for a child is taken in a sealed plastic box clearly labelled with the child's name and the name of the medication. Inside the box is a copy of the consent form and a card to record when it has been given, including all the details that need to be recorded in the medication record as stated above.
- On returning to the setting the card is stapled to the medicine record book and the parent signs it.
- If a child on medication has to be taken to hospital, the child's medication is taken in a sealed plastic box clearly labelled with the child's name and the name of the medication. Inside the box is a copy of the consent form signed by the parent.

Legal framework

- The Human Medicines Regulations (2012)

This policy was adopted at a meeting of:	Humpty Dumpty Pre-School
Held on:	05/11/17
Date for review:	05/11/18
